Subject: map

I went to the appropriate site but saw no place to click for the map for affected area WHAT I DO KNOW after living here in the BASIN in Greenough since 1974 similar to yours in Missoula , that there is a high long run/ridge of mountains between us in this basin (the Missoulian called it in 1912 Sunset Basin) and the predominant wind is going to be 99.9% (FROM) the south-west this time of year AND in the winter or other's its going to be from the west ,winter from the north to the south , I contend after living here this long there is no way you can prove any little smoke from this low populated area can send any pollutants to the Missoula Basin thank you G.G.Good
