

Missoula County's Streamside Protection Program presents:

**River Channel Migration Zone Mapping:  
Graphically Showing the Natural Movement of a River through Time**

Thursday, July 9th—6:00 to 7:30 PM

Missoula Public Library  
301 E. Main St, Missoula

In our continuing efforts to protect people, private property, and the values associated with streams and riparian areas, Missoula County is once again hosting Karin Boyd of Applied Geomorphology for an educational presentation about Channel Migration Zones (CMZ). All are welcome and invited to learn why channel migration is important to river health, and how understanding channel migration can contribute to the protection of rivers and property. We'll learn the process of mapping a river's CMZ, discuss how this information can be used, and explore CMZ mapping projects on the Yellowstone and Clark Fork Rivers.
