

Milltown Superfund Site Conceptual Redevelopment Plan

This drawing shows a potential future for Milltown following Superfund cleanup and restoration of the two rivers. Boulevard trees would line Hwy 200 and a Gateway to Historic Milltown would be featured at the pedestrian and Highway 200 bridges. Lands now within the Milltown Reservoir would be converted to a publicly-owned park with trails, river access sites and an interpretive center. A trail system would be completed throughout the site, connecting to Missoula's Riverfront Trail and extending upstream along the Blackfoot and Clark Fork Rivers. Pedestrian bridges would be provided at the Black Bridge, the Duck Bridge site and across the river island below the interpretive center site. An Interpretive Center describing the history of the Blackfoot and Clark Fork Rivers, Native American History, the history of Bonner/Milltown and historic cleanup of the Superfund Site and river restoration would be built out of the floodplain, near where the dam now stands. The area would provide amenities for local residents and visitors alike. *This conceptual plan was proposed by the Milltown Superfund Site Redevelopment Working Group and adopted by the Missoula County Commissioners in 2005.
